

**14th WRMIS WORKSHOP  
on  
Radiation Monitoring for the International Space  
Station**

**DUBLIN CASTLE**

**8<sup>TH</sup> - 10<sup>TH</sup> SEPTEMBER 2009**

**HOSTED AND ORGANISED BY THE**

**DUBLIN INSTITUTE FOR ADVANCED STUDIES**

**CHAIRMAN: Guenther Reitz, DLR**  
**LOC: Denis O'Sullivan, DIAS**  
**Eileen Flood, DIAS**  
**Anne Grace, DIAS**

# Development of a Numerical Model for the MATROSHKA Phantom

14<sup>th</sup> Workshop on Radiation Monitoring on International Space Station,  
Dublin, 8<sup>th</sup> – 10<sup>th</sup> September 2009

**<sup>1</sup>Beck, P.; <sup>2</sup>Berger, Th.; <sup>3</sup>Bergmann, R.; <sup>3</sup>Hajek, M.; <sup>1</sup>Latocha, M.; <sup>2</sup>Reitz, G.; <sup>1</sup>Rollet, S.; <sup>3</sup>Vana, N.; <sup>1,4</sup>Zechner, A.**

<sup>1</sup>AIT Austrian Institute of Technology GmbH, Health and Environment Department, A-2444 Seibersdorf, Austria

<sup>2</sup>German Aerospace Center, Institute of Aerospace Medicine, D-51147 Cologne, Germany

<sup>3</sup>Vienna University of Technology, Institute of Atomic and Subatomic Physics, A-1020 Vienna, Austria

<sup>4</sup>Graz University of Technology, Radiation Physics Unit, A-8010 Graz, Austria

## Outline

- MATSIM – the project
- Description of the MATROSHKA model
- Photon Measurements with the MATROSHKA head
- Simulations of MATSIM head
- Comparison between measurement and simulation
- Outlook

## MATSIM – the project

### MATROSHKA

- International collaboration of >19 research institutes, ESA experiment under the scientific and project lead of „Deutsches Zentrum für Luft- und Raumfahrt“ (DLR)
- Long-term dose measurements onboard International Space Station, started in 2004

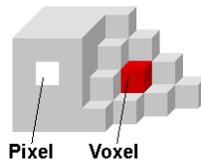

### MATSIM

- carried out at the Austrian Institute of Technologies, Seibersdorf in collaboration with DLR and Atomic Institute, Vienna
- Development of a novel numerical model
- Same geometry, material and density distribution as real phantom
- Simulation of energy deposition in photon and neutron reference fields

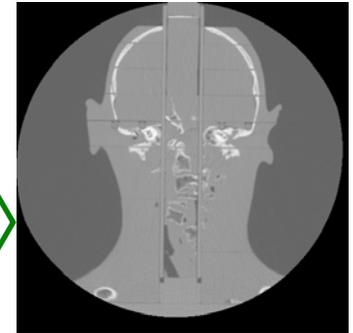

# MATROSHKA - Computer Tomography Scan

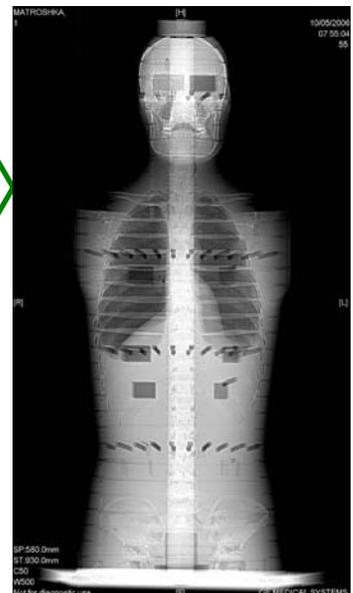

- Two CT scans of MATROSHKA provided by DLR
  - Torso and
  - Head

|      | Torso                                     |                  | Head                                      |                  |
|------|---|------------------|---|------------------|
| Axis | Number of pixels                          | Layer width (mm) | Number of pixels                          | Layer width (mm) |
| X    | 512                                       | 0.78             | 512                                       | 0.62             |
| Y    | 512                                       | 0.78             | 600                                       | 0.4              |
| Z    | 278                                       | 3.125            | 512                                       | 0.62             |

# MATROSHKA CT scan – data processing

- Special software developed to read and manipulate CT data
- Definition of materials
- Append all slices to one file for Fluka

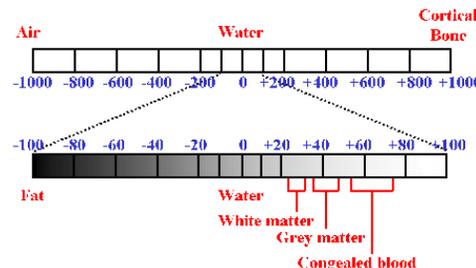

Matrix with Hounsfield numbers (HU)

|      |      |      |     |     |    |
|------|------|------|-----|-----|----|
|      | 21   | 13   | 4   | -6  |    |
| -65  | -10  | 20   | 16  | 14  | 10 |
| -112 | 31   | 28   | -25 | -37 | 41 |
| -264 | 3    | 47   | 2   | -15 | -2 |
| -472 | 3    | -68  | -2  | 5   | -7 |
|      | -133 | -154 | -7  | 20  |    |

build regions  
(e.g. tissue from -80 to 80)

implement in  
Monte Carlo code

geometry model with  
assigned materials

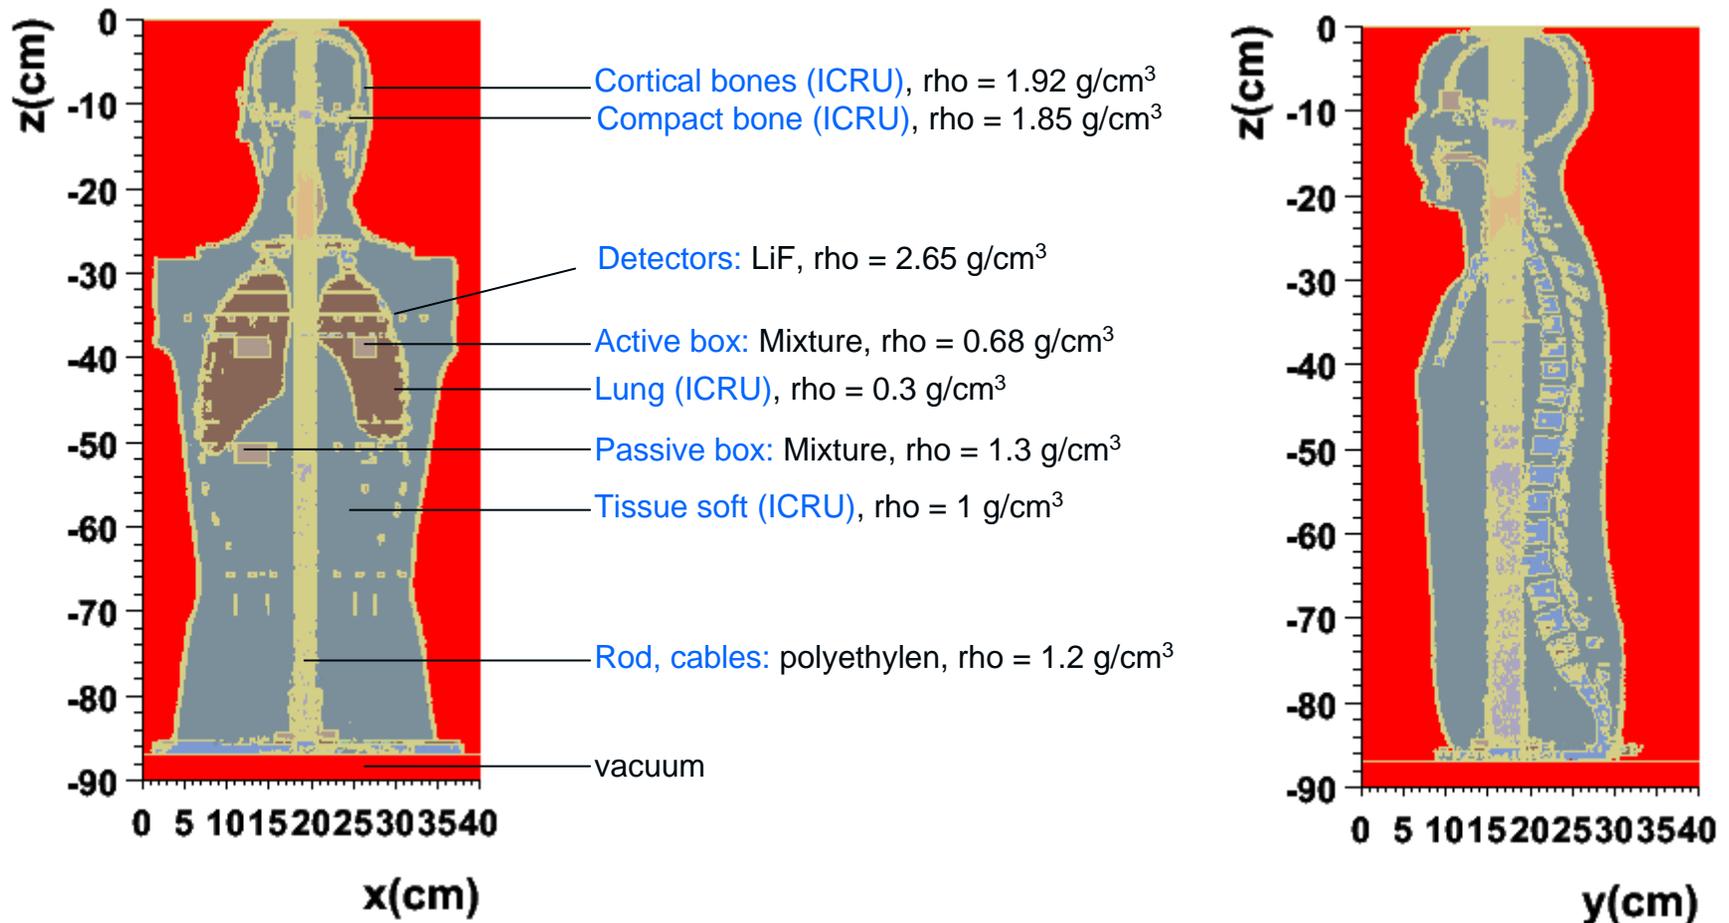

## Monte Carlo Code FLUKA

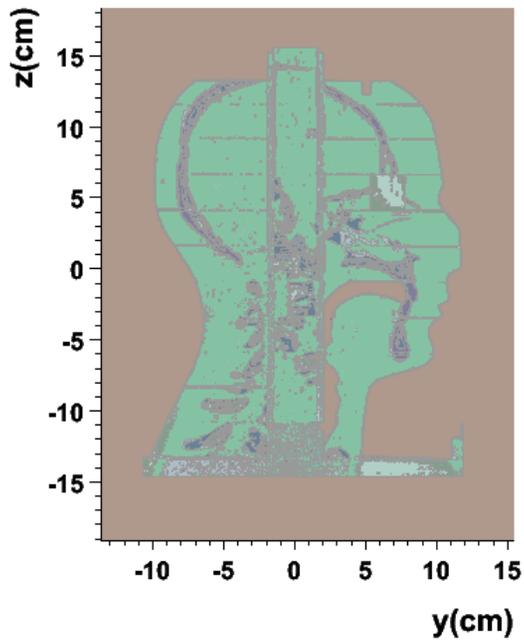

- Particle transport and interaction with matter
- 60 different particles
  - photons and electrons from 1 keV to thousands of TeV
  - muons of any energy, hadrons up to 20 TeV
  - neutrons down to thermal energies and heavy ions.
- Optimized computer algorithms
- high energy experimental physics and engineering, accelerator shielding, detector design, cosmic ray studies, dosimetry and micro-dosimetry, medical physics and radiobiology, neutrino physics
- **Voxel geometry**: translate a CT scan into a dosimetry model

# FLUKA geometry – MATSIM Torso

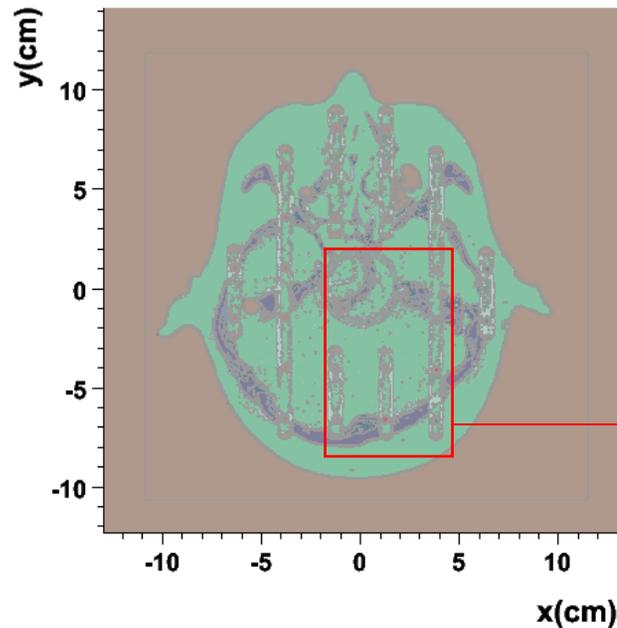

vertical cut from the front (left) and from the side (right)

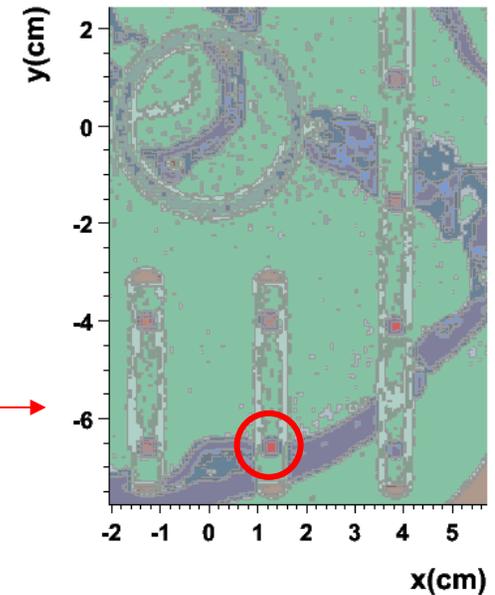

# FLUKA geometry – MATSIM Head

vertical center cut  
from the side

horizontal cut in slice # 4  
from the top

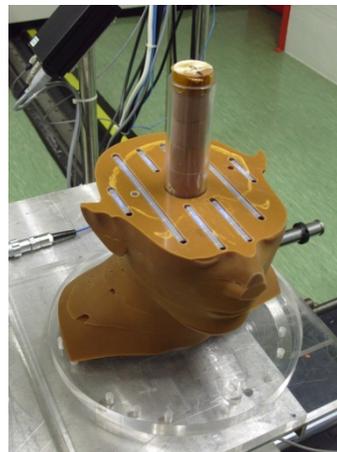

detector location in  
slice #4

## Reference measurements - Co-60 photons

- Reference Point: rod center, slice #5
- Distance Source – Head: 450 cm, field size: 27 x 27 cm
- $K_{\text{Air}} = 200\text{mGy}$ ,  $\dot{K}_{\text{Air}} = 159.5 \mu\text{Gy/s}$
- Beam incidence: front, omni directional (30° steps)

MATROSHKA head in front of the irradiation facility, reference point is marked

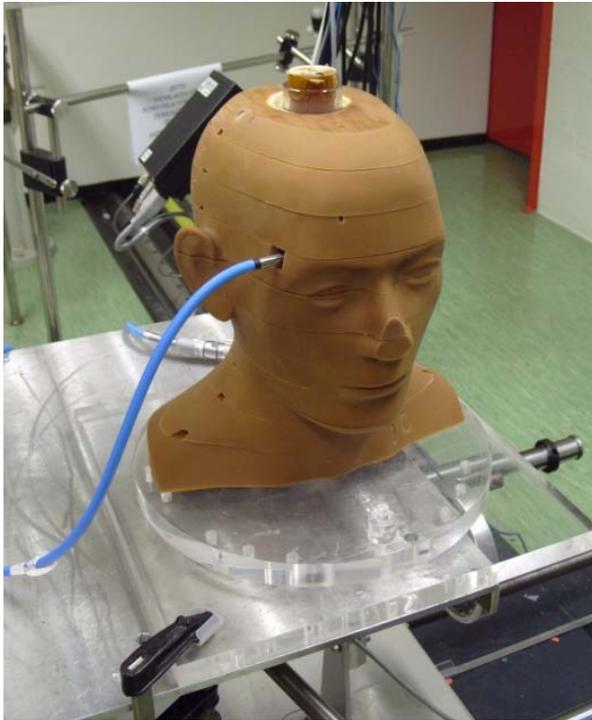

TLD set in slice#4

Ionization chamber

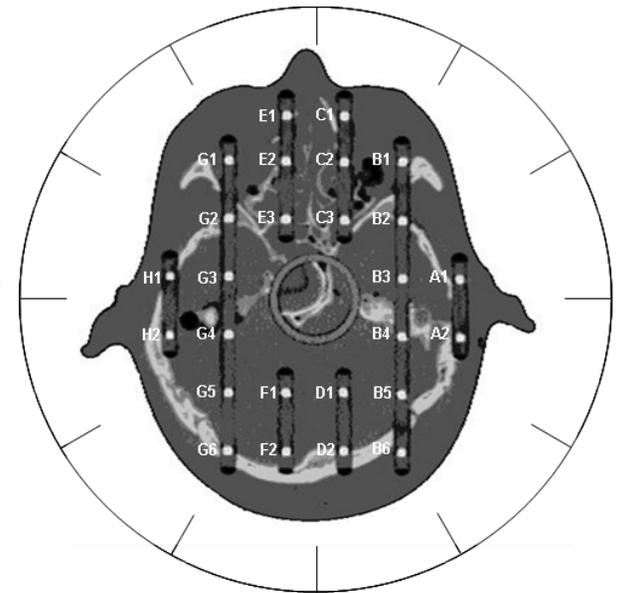

## Reference measurements - Co-60 photons

Active box eye

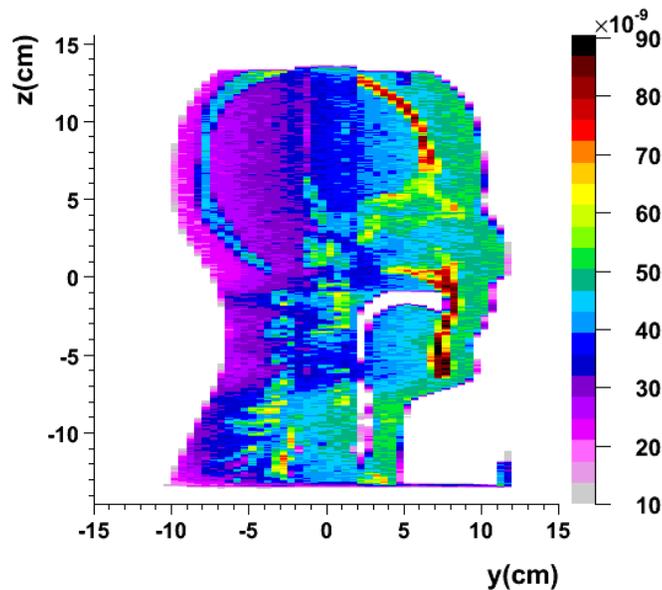

Chamber in PMMA rod , slice #2

Experimental set-up:  
TLD numbering and beam  
incidence (30 degree steps)

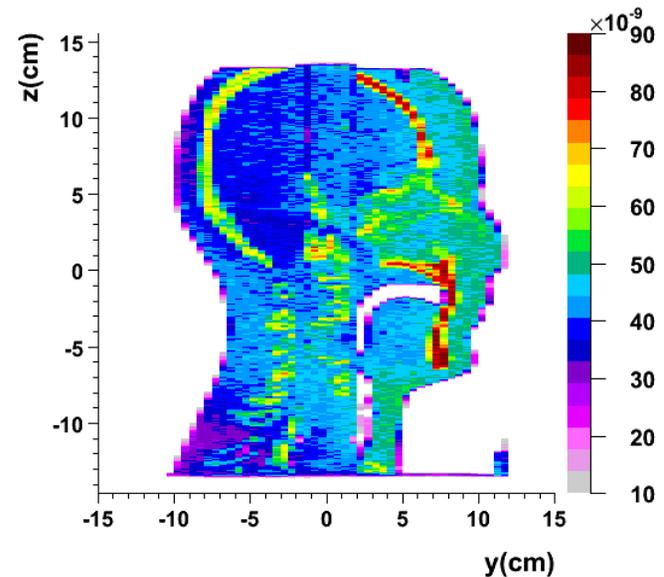

# MATSIM Head Simulation of the Energy Density due to $^{60}\text{Co}$

Front beam incidence

Deposited spatial  
energy density  
( $\text{GeV}/\text{cm}^3$ ) in the  
head, side view.

60 degree beam incidence

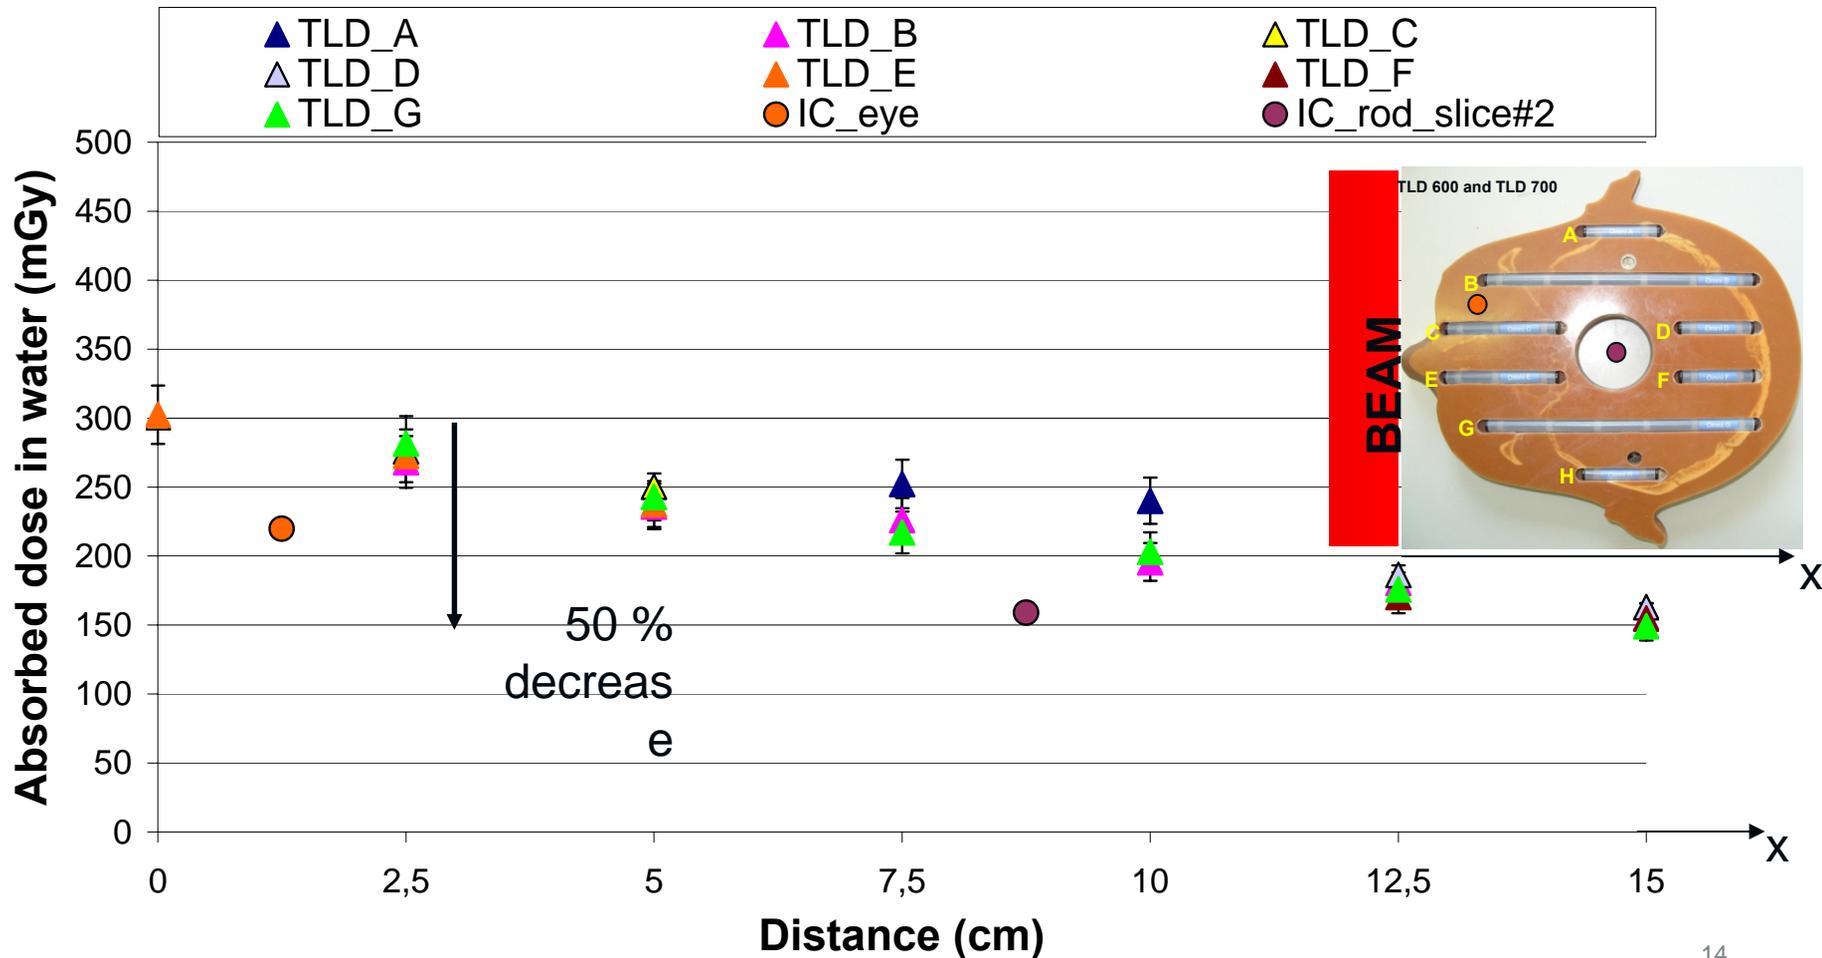

Deposited spatial  
energy density  
( $\text{GeV}/\text{cm}^3$ ) in the  
head', side view.

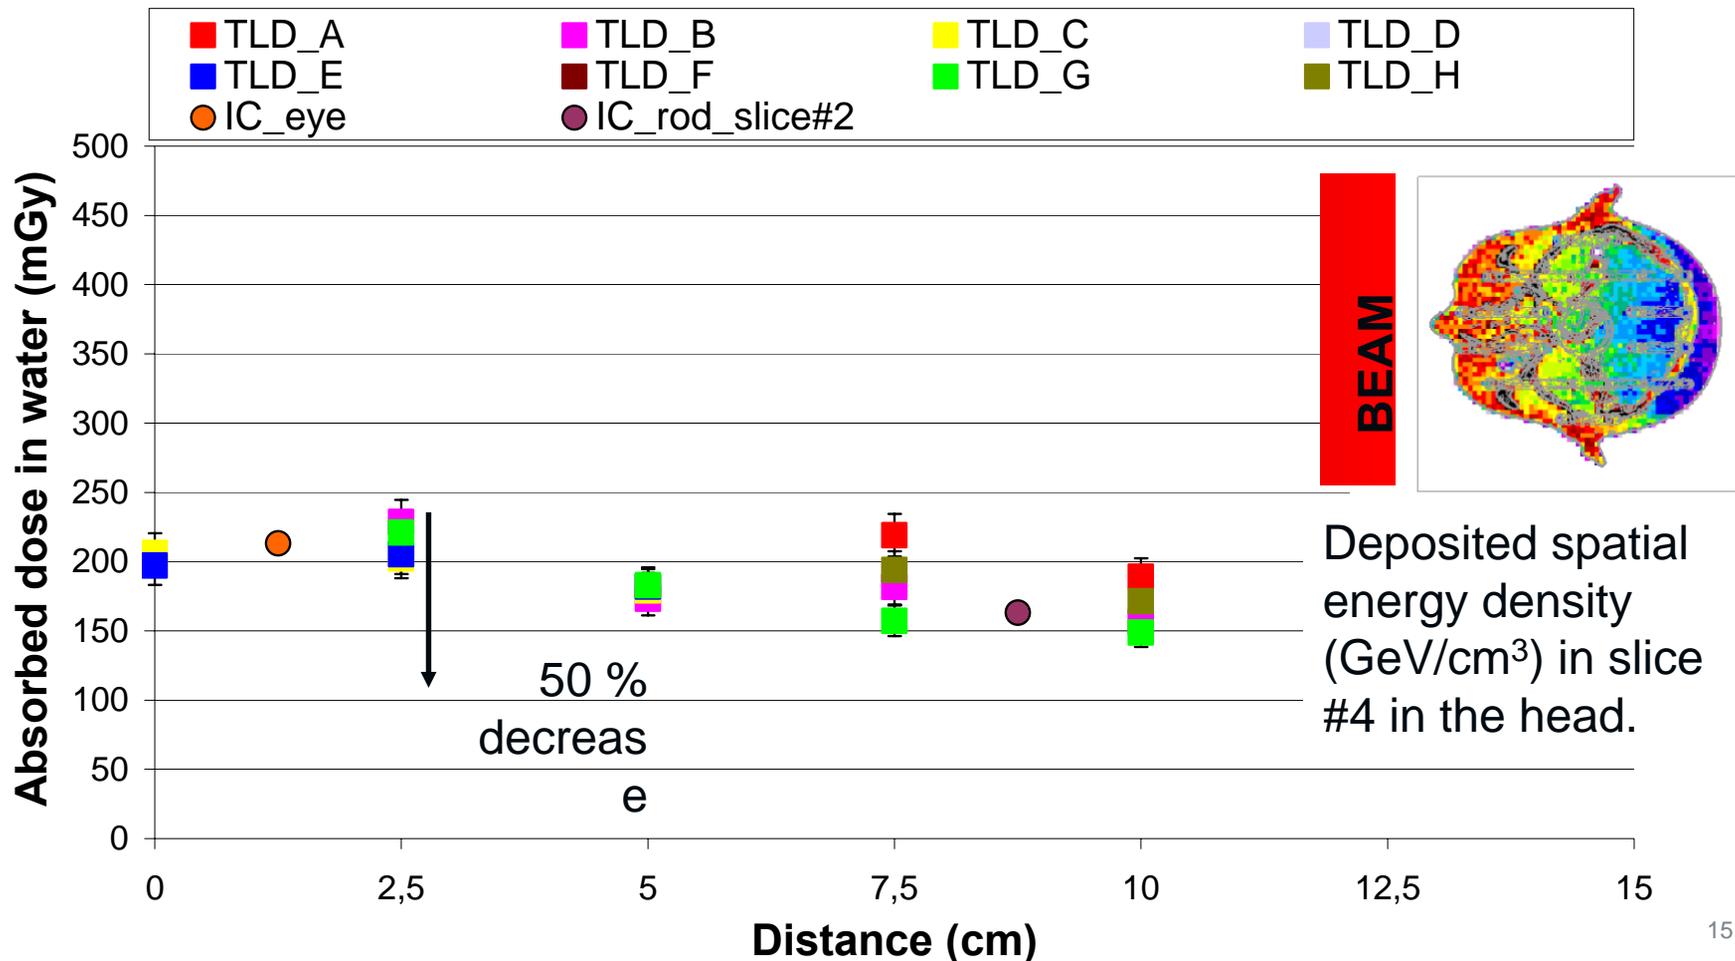

## Results – Ionization chamber

# Results –Measurements TLD & IC, Front Irradiation

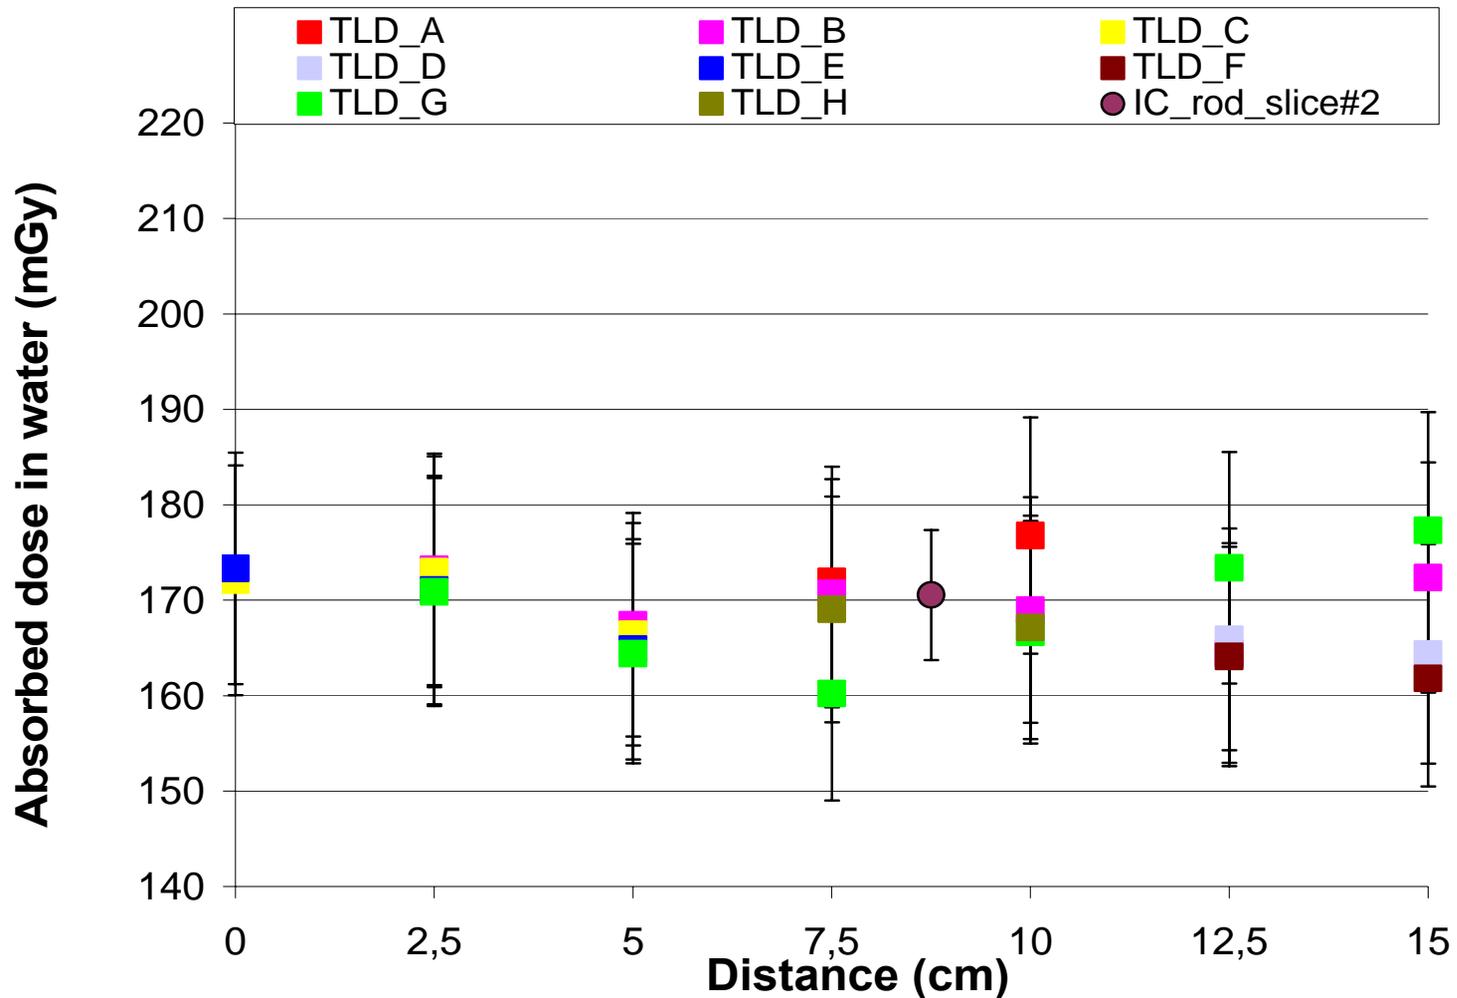

## Results – Simulations TLD & IC, Front Irradiation

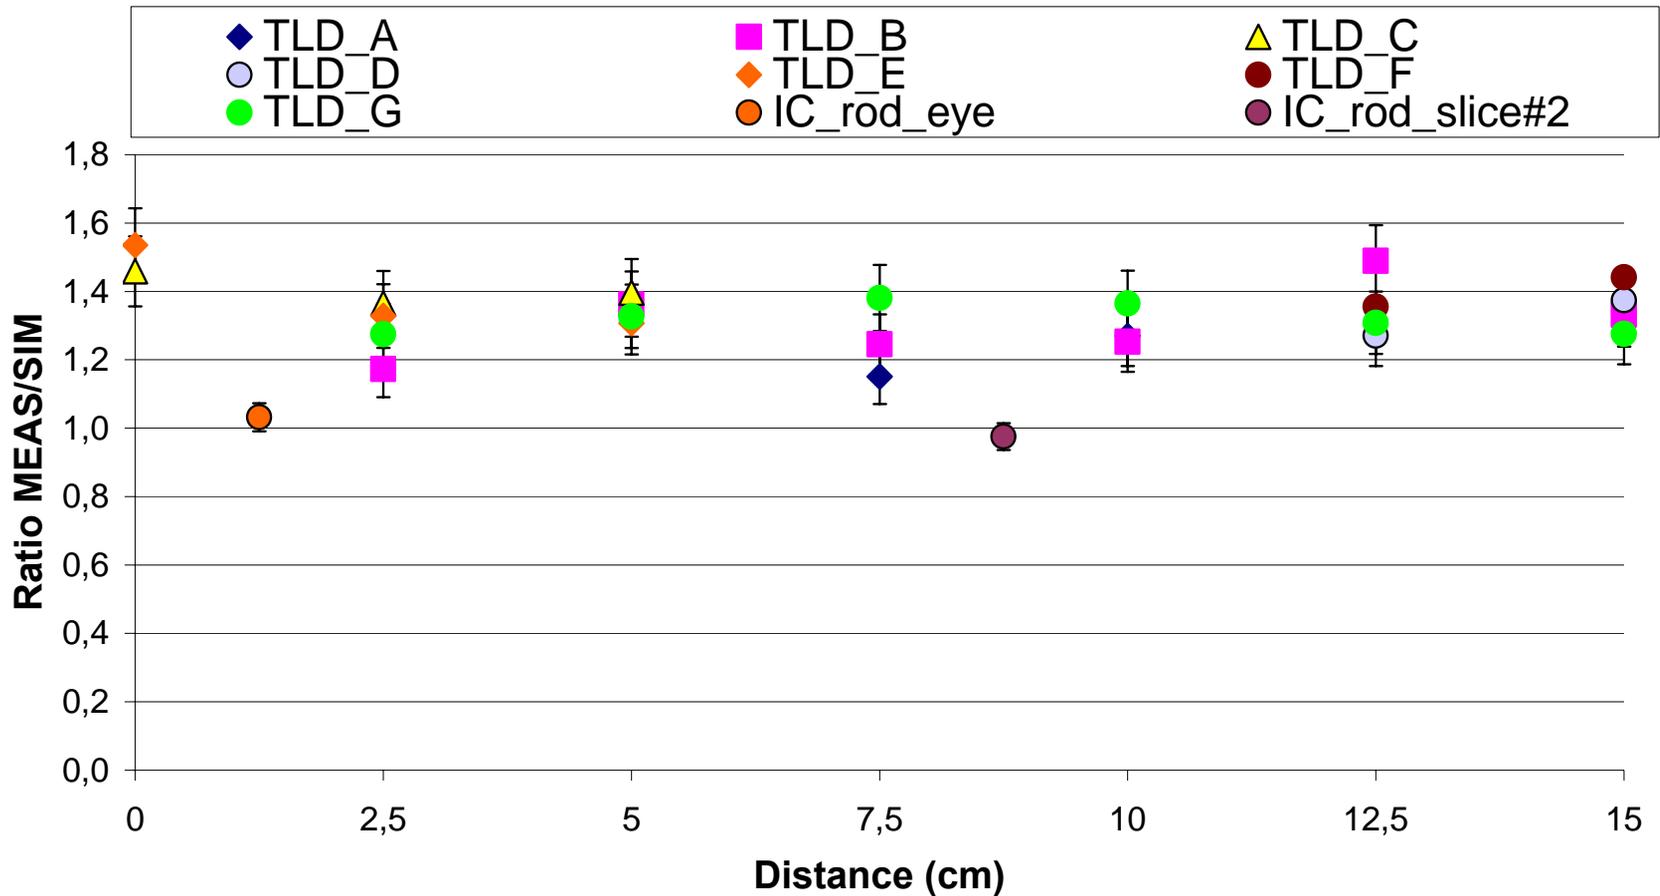

## Results – Measurements TLD & IC, Omni directional

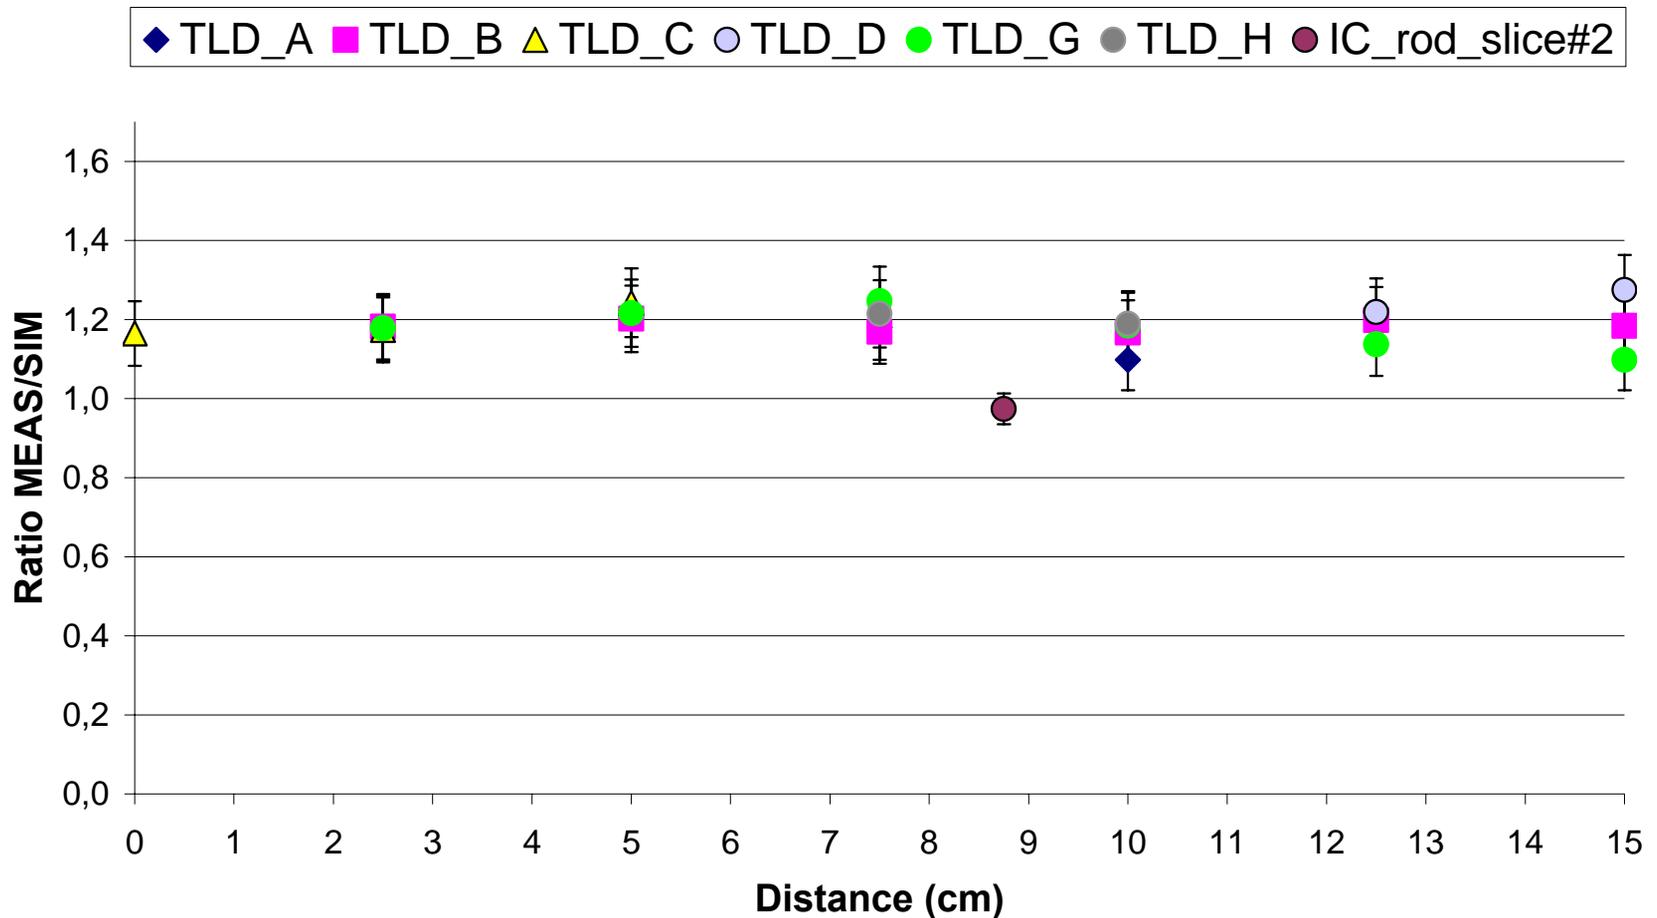

## Results - Simulations TLD & IC, Omni directional Irradiation

## Comparison Measurements and Simulations, Front Irradiation

## Comparison Measurements and Simulation, Omni directional Irradiation

## Conclusion: Co-60 Measurement and Simulation

### Ionization chamber

- Good agreement between measurements and simulation (within 5%)
- Agreement compared to TLD measurements within 20-30%

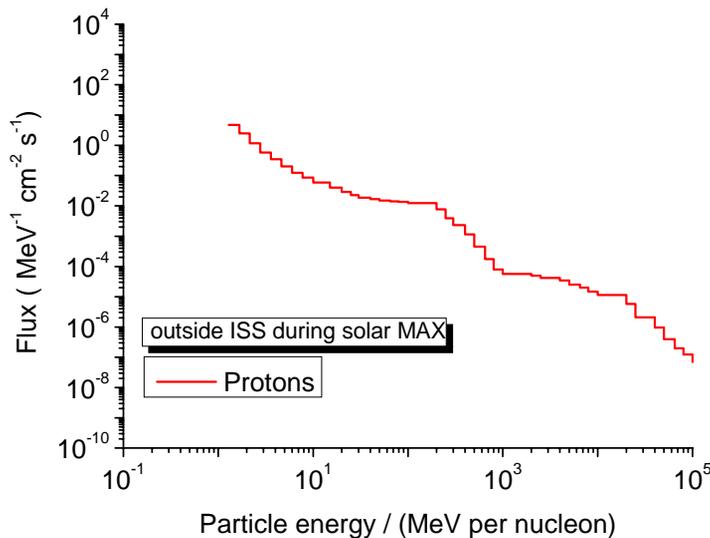

### Thermoluminescence dose meters

- Agreement for omni directional irradiation within 10%
- For front within 35%

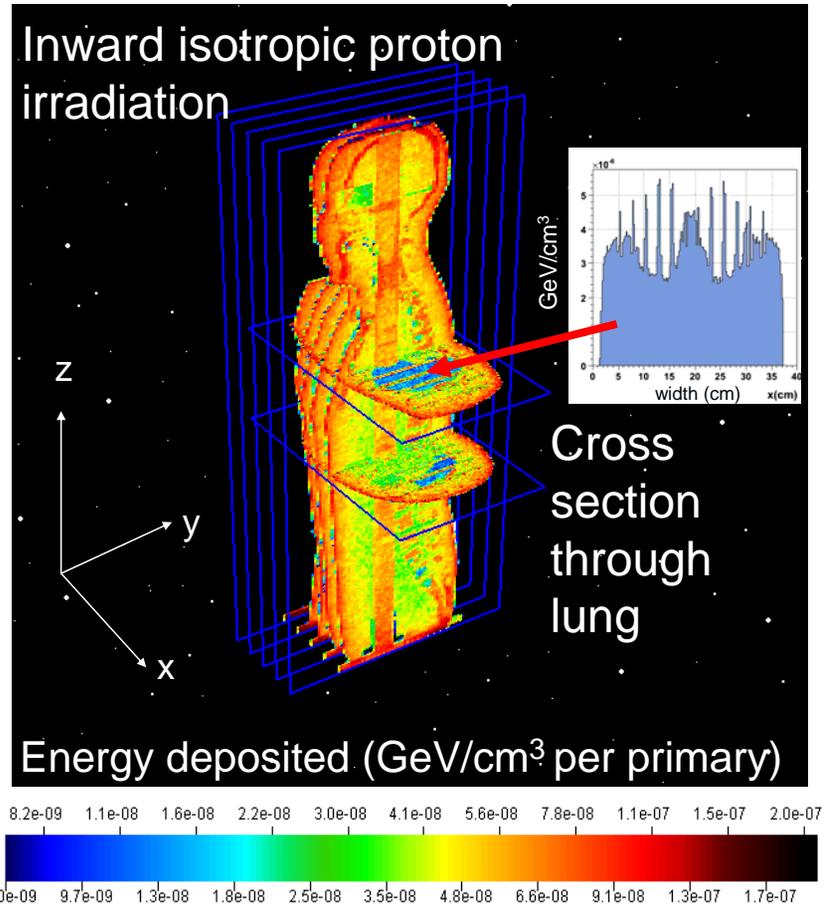

### Next steps

- Detectors of the scan geometry will be adapted to the actual measurements
- Detectors will be simulated for LiF as well as for tissue and/or water
- Investigations of the electron spectrum within TLD detectors
- Investigation of the TLD calibration
- Reference measurements and simulations with neutrons, protons, and heavy ions

# Outlook: MATSIM Investigations in Space Radiation Environment

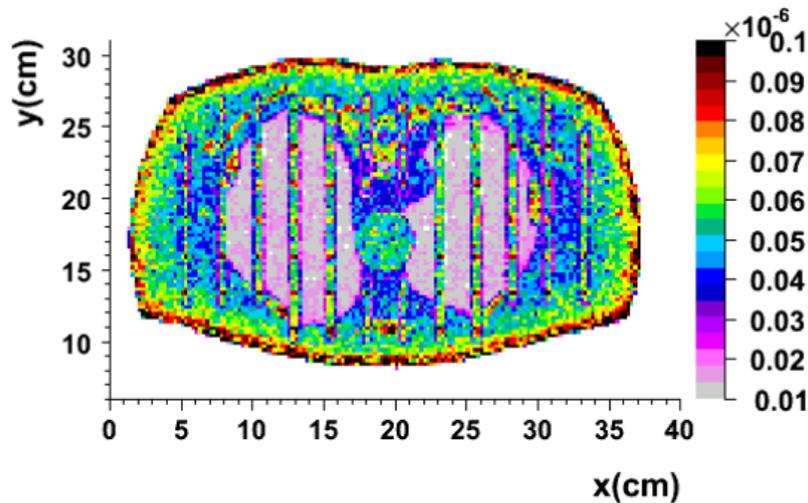

Fluence proton spectrum, outside ISS during solar maximum at 400 km (Armstrong, 1998)

## Outlook: MATSIM Investigations in Space Radiation Environment

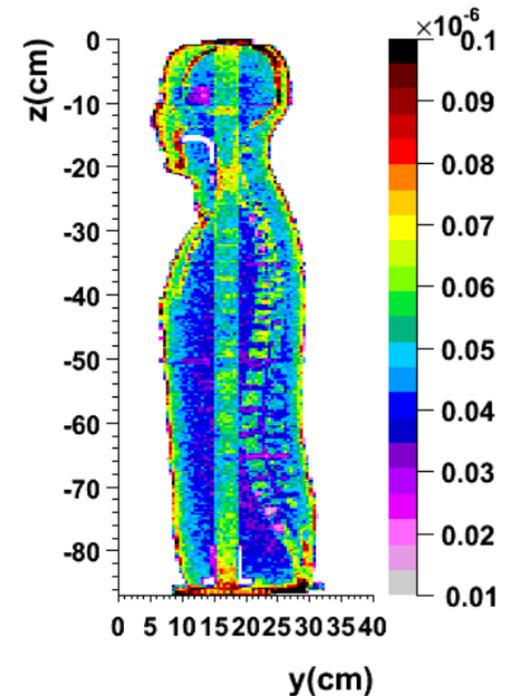

energy density (GeV/cm<sup>3</sup>/primary)

Isotropic proton irradiation

Cross section through the lung, MATSIM torso

energy density (GeV/cm<sup>3</sup>/primary)

Isotropic proton irradiation

Cross section center MATSIM torso

## Acknowledgments

The funding and the support by the Austrian Space Applications Programme (ASAP) and the MATROSHKA consortium is acknowledged.

Many thanks to DLR for providing the MATROSHKA phantom and the CT scans.

Many thanks also to ATI for the quick analysis of the TLD data during vacation time!

Thank you for your attention!
